DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Charles Gaines on June 21, 2007.

The Examiner initiated an interview with the Applicant in order to cancel claims that were found to be restrictable by the Examiner. In order to expedite the process of the examination of this application, the Applicant agreed to cancel claims 23-29 as follows:

2. Claims 23-29 are cancelled.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground

provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-20 and 22, and 30-60, are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-21 of copending Application No. 10/505,197. Although the claims of the application are not identical to the claims of the copending application, the claims are not patentably distinct from each other and claim common subject matter disclosing a system and method for crystallographic metrology comprising: a sample holder for holding a crystalline sample; a first ion source for generating a first ion beam; a scanning actuator for controlling the relative movement between the first ion beam and the crystalline sample, the scanning actuator being controllable for directing the first ion beam at desired areas of the crystalline sample; an electron detector for detecting secondary electrons emitted from the crystalline sample; a first processing system for creating a contrast intensity image based upon secondary electron emissions from the crystalline sample; a second processing system programmed to provide crystallographic information based on the contrast image intensity data.

Independent claims 1 and 30 of the application cover the same material as independent claims 1 and 7 of the copending application. Independent claims 8 and 38 of the application cover the same material as independent claims 8 and 19 of the copending application. Independent claims 13 and 50 of the application cover the same material as independent claims

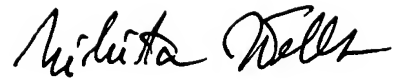

10 and 21 of the copending application. Many of the dependent claims of the application are similar to the dependent claims of the copending application.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Except for the double patenting problem as outlined above, no other prior art was found to disclose or make obvious the key features of the applicant's invention.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Houge et al. (6,577,970 B2) disclose a method determining a crystallographic quality of a material located on a substrate.
